

PROTECT YOUR INFORMATION ONLINE!

USE STRONG PASSWORDS

One of the best lines of defense to protect your information is a strong password. For each unique password you create, make sure it has at least 14 characters, including special characters, and numbers. Make sure it's complex!

UPDATE SOFTWARE

When computer/phone operating systems (ie. Chrome, iOS), software, or applications release updates, make sure to install them ASAP. They may contain security updates meant to secure vulnerabilities and stop security breaches

STEER CLEAR OF FREE WIFI

Be careful when using free public wifi. Usually, it lacks security protection and anyone on public wifi can access the information on the device you use. Refrain from using any private info when connected to this wifi.

USE AN ANTIVIRUS SOFTWARE ON YOUR COMPUTER

Sometimes you may not know what to look out for when protecting your devices. That's why it's essential to download antivirus software for your computer/laptop. This software is developed to track malicious code and alert you when your computer may be in danger.
